

Homework for chapter 7

You are provided with the *index.html* file and *style.css*¹ and 4 *images* in their related folders (css & assets folders respectively). You **must not** make any changes to the *index.html* file, in fact the file that you will send me for this project is only **style.css (no other files)**. The only information about the colors that you need to know is for upper part of header and the footer, use #aaaaaa for both the header text and the footer. (notice that h1 and img are elements inside the header element)

Add necessary styles in the *style.css* file in order to make the page look like:

This is an abstract wireframe for this project

Other requirements:

- The webpage must be **fluid**.
- Place the three `<article>` elements inside the `<main>` element side by side as shown. They must be divided in three equal columns.
- Pay attention to how everything is aligned in center. How the `<input>` elements are aligned and have the same width (except the button).

1. Notice that style.css contains the following lines and must not make any changes to them and add your code below it:

```
*{padding: 0; margin: 0; box-sizing: border-box;}
```

```
#container {  
    max-width: 960px;  
    min-width: 500px;  
    background-color: #eeeeee;  
    margin: 5px auto;  
}
```

```
/* DO NOT MAKE ANY CHANGES TO THE ABOVE CODE. ADD YOUR CODE BELOW THIS COMMENT LINE */
```
