

Short mini project

- The HTML (index.html) file is given. No changes must be made to it.
- CSS (**style.css**) file is partially done, you will provide the necessary style coding to match figure 1.
- In figure1 you will find style values for different parts of the page.
- Carefully look at the HTML file for various elements and IDs that you would want to include in the CSS file and apply styles to them.
- The only file that you will update is **style.css**
- Zip the HTML and your updated CSS file and send it to me.
- Optionally, center the main container inside of viewport as shown.
